KETEK
GROUP

Results Driven.

[VISION]

To be a team that provides industry leading service for excellent value.

[MISSION]

To achieve our Vision by conducting business ethically with an unsurpassed level of safety, quality, and environmental stewardship.

500+
EMPLOYEES

Who We Are

Ketek Group was founded in 1979 on principles of fairness and honest dealing, and on the expectation that work be done the right way. From our headquarters in Alberta and offices across Western Canada, we provide services and rental equipment to clients primarily in the oil and gas, construction and municipal sectors. Ketek's strength comes from the experience, skill and work ethic of its ownership group and its employees. The relationships it has built up over the years with its business partners.

What We Do

Ketek today is a leading supplier of services and rental equipment in Western Canada. We are committed to quality products and services, on time, on budget and on spec. We operate in fields as diverse as:

- Oilfield Services
- Construction Dewatering
- Well Testing & Pumping
- Equipment Rentals
- Manufacturing
- Electrical & Power Services
- Industrial Automation & Control
- Engineering Design & Technical Review
- Safety Consulting

Where We Are

The company today operates from nine locations and is able to serve you wherever your next project takes you.

Ketek Global

For more than 47 years, Ketek has provided engineered industrial and environmental solutions for regulated, remote, and mission-critical operations across Canada and in over 40 countries worldwide. From its Canadian roots, Ketek has grown into an international provider, expanding into markets including the United States, South America, Libya, India, Africa, Sri Lanka, and Australia, among many others, built on a foundation of trust, performance, and reliability.

Industries

Trusted Provider of Comprehensive, Start-to-finish Solutions Across a Wide Range of Sectors

**KETEK
GROUP**

Results Driven.

Ketek Group provides extensive supportive services for the oil and gas, mining, pipeline and municipal industries, leveraging over four decades of experience.

Oil & Gas

Specialized support for drilling, completions, and production operations with high-performance surface equipment rentals including pumps, lighting, heating, and temporary power solutions. Ketek also provides experienced loader and skid steer operators, including Canada's only weigh-scale equipped loader service for wet sand fracturing support, along with long-line water transfer systems for demanding field operations.

Mining

Comprehensive mine dewatering and water management solutions tailored to active mining operations. Services include deep well installation, pump testing, system operation, and fully automated dewatering systems designed to support safe, efficient, and uninterrupted mine performance in challenging environments.

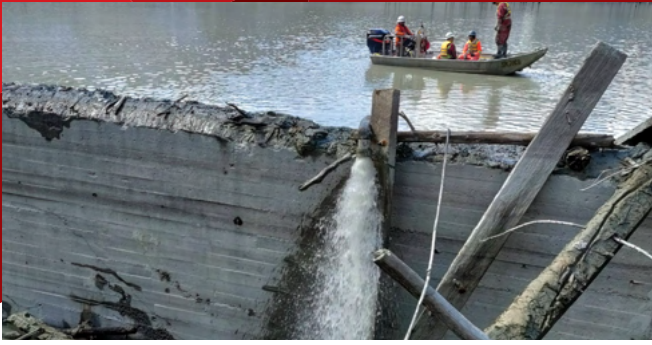

Infrastructure & Utilities

Water management solutions for municipal and infrastructure projects, including dewatering, sanitary bypasses, and stormline bypass systems. Ketek supports projects with experienced crews, pumping expertise, and a large fleet of rental equipment to maintain safe and efficient operations from planning through execution.

Pipeline

Specialized wellpoint dewatering solutions for pipeline trenching and utility construction projects. Ketek provides reliable pumping systems, experienced field personnel, and equipment support to maintain dry, stable working conditions and keep projects operating safely and efficiently in changing ground conditions.

Emergency Response

Rapid-response support for emergency and disaster situations with high-capacity pumps, large-volume hose systems, Aqua Dams, temporary power, lighting, and heating equipment. Ketek also provides water supply and pumping support for firefighting operations, flood mitigation, and critical infrastructure protection.

Transportation

Heavy hauling and transportation solutions backed by a versatile fleet of winch tractors, heavy haul units, hot shot trucks, and specialized trailer configurations. Ketek supports the safe and efficient movement of equipment, materials, and oversized loads across Western Canada and remote project locations.

For more than four decades, clients have trusted Ketek to deliver solutions that are practical, sustainable, and built to last. We continue to stand behind every project we undertake, providing the experience, equipment, and dedication needed to help our clients succeed.

Construction

Integrated project support through equipment rentals, dewatering services, and scaffolding solutions for commercial and industrial construction projects. Ketek provides experienced personnel, pumping systems, temporary utilities, and field support services to help keep projects safe, efficient, and on schedule.

Global Sales

Ketek Global drives opportunities, partnerships, and project delivery for Ketek Group worldwide—providing a single accountable partner from development to execution with a practical, results-focused approach. We ensure efficient delivery, clear communication, and reliable outcomes in even the most demanding environments.

Water Solutions

Seamless Water Transfers and Optimized Pumping Solutions

Water Transfer

- Long-Distance Water Transfer
- Sewer & Storm Bypass Pumping
- River Bypass

Experience seamless water transfer and optimized pumping solutions from Ketek Group. Our efficient systems ensure the reliable movement of large volumes of water over long distances, tailored to meet your specific needs. From river and sewer bypass pumping to long-distance water transfer, our solutions support the demands of critical construction, municipal, and industrial operations. Ketek can deliver water wherever it is needed, winter or summer, from any source and depth. We provide the manpower, expertise, and equipment to transport water from source to destination, safely and efficiently. Short or long-term. Large volume or small.

KETEK
GROUP

Results Driven.

Dewatering / Groundwater Control

- Deep Well Pumps
- Vacuum Wellpointing
- Eductor Dewatering Systems
- Basal and Devonian Horizontal Dewatering Facilities
- Sump Pumps

Controlling and removing groundwater from construction sites, excavations, pipeline trenches, mines, and industrial operations requires a high level of skill and specialized equipment. Dewatering presents a range of challenges, from managing high water volumes to maintaining safe working conditions and protecting the integrity of surrounding infrastructure. Whether it's utility installation and repair, road and bridge work, or foundation construction, effective water management is a critical part of the job. When dewatering is required, proper treatment before discharge isn't just best practice, it's an environmental standard. Fortunately, there are proven solutions. Ketek has the expertise and equipment to deliver effective, reliable, and responsible dewatering across a wide range of applications.

Well Testing, Monitoring, Servicing & Controlling

- Groundwater Sampling
- Aquifer Testing (Pump Testing)
- Injection Testing
- Water Well Control and Monitoring

Our well testing services provide safe, reliable, and accurate assessment of groundwater systems. We support a full range of solutions including groundwater sampling, aquifer (pump) testing, and injection testing to determine well performance and water quality. Designed for industrial, oilfield, and environmental applications, our services help ensure regulatory compliance, optimize production, and extend the life of well systems through proper monitoring and maintenance.

Water Tree Systems

- Instant, High-Volume Flow
- Safe and Remote-Controlled Operation
- Flexible Power Options

The system includes a submersible pump, powered by either a diesel generator or line power, giving you flexibility based on your site's setup. With remote operation from the cab, operators can fill water trucks efficiently, ensuring rapid, high-volume flow with minimal downtime.

Other Solutions

- Emergency Pumping, Flood Control
- Pump Sales, Repair, and Testing
- Sump/Lift Station Maintenance
- Dust Suppression Systems
- Water Well Development
- Confined Space Entry
- Fire Water Supply
- Hydro Testing

HDPE Fusing

Ketek Group provides specialized butt fusion services for HDPE piping systems, delivering strong, seamless, and durable pipe connections for industrial applications. Using advanced fusion equipment and trained technicians, Ketek precisely machines, heats, and joins HDPE pipe ends to create continuous pipelines that maintain full strength and pressure integrity. This method is widely used in water transfer, oilfield and infrastructure projects to ensure reliable performance, long service life and safe operation in demanding field conditions.

We specialize in water treatment processes and technologies to remove oil, hydrocarbons, heavy metals, solids, and other contaminants from operations and wastewater streams. Using a range of treatment media, chemical processes, and filtration methodologies, we develop tailored solutions based on in-situ water quality and specific discharge requirements. Our approach ensures fast and effective treatment of challenging contaminants, enabling compliant discharge.

PIECES OF
PRIMARY
EQUIPMENT

Pumping Equipment

- Diesel and Electric transfer pumps
- Deep Well Pumps
- Electric Submersible pumps
- Power and Control Systems

Ketek offers a diverse fleet of pumping equipment to handle everything from light-duty dewatering to high-volume, high-pressure applications. Our inventory includes hundreds of electric submersible pumps ranging from 2" to 10" (2HP to 110HP), approximately 150 trailer-mounted diesel pumps from 4" to 12" discharge, and a large supply of well pump stages and motors for deep well systems. We also provide specialized pumps, including diaphragm, peristaltic, and other positive displacement units for chemical injection and unique applications. Whatever the requirement, Ketek delivers reliable pumping solutions at scale. All pumping system and equipment available with basic and advanced power and control systems.

Power Equipment

Our line of generators (equipped with remote monitoring and telemetry)—available in trailer or skid-mounted units—delivers powerful, quiet, and dependable performance. Ranging from 5 kW to 500 kW in diesel, these units are suited for applications from small jobs to large industrial sites, with new natural gas options now available for cleaner energy solutions. The Triple Combo (fuel storage, generator, and light tower) is ideal for camps, rigs, and construction sites, featuring dual 100 kW generators with positive air shut-off for added safety. Voltage options include 120 V/240 V, 480 V, and 600 V.

Light Equipment

- Stadium Light Towers (shore/generator powered)
- Mobile Hydraulic and Crank Mast Light Towers
- Skidded Light Stands 110V

All equipment comes with LED Bulbs for reduced power consumption

Heating Equipment

- Flameless heaters
- Frost Fighters
- Ground heaters
- Roughneck Air heaters

Water Management

- Layflat and suction hose
- Manifolds
- Line Crossings
- Filter vessels
- Fish/Suction screens
- Air compressors
- Skid steers
- Loaders

We have all the tools to complete your water transfer safely and efficiently while being environmentally compliant. Let us know your pumping needs. We will work with you to develop a solution that is planned and managed for success.

Ketek offers the rental or purchase of fish screens compliant with standards set by Canada's Department of Fisheries and Oceans to ensure the preservation of aquatic life.

Ketek Incinerators

Ketek Group provides high-performance incineration solutions built for safety, efficiency, and environmental compliance. Our Controlled Air Incinerators use a dual-chamber design to eliminate harmful pollutants, meeting strict NFPA and CCME standards, while our Forced Air Incinerators offer an eco-friendly, flexible approach to solid waste disposal with reduced emissions. With over 300 units installed worldwide, we also design custom incineration systems tailored to your needs —helping lower costs and minimize environmental impact.

CYCLONATOR™

All Cyclonator™ incinerators are proudly manufactured in Canada at our Alberta facility, reflecting our commitment to quality and excellence in Canadian craftsmanship.

Solid Waste Management

We offer practical waste management solutions with Ash Bins for safe storage of incinerator ash prior to disposal, and Enviro Bins designed for effective waste segregation, including oil, paper, plastics, and glass—supporting cleaner, more organized job sites.

Fuel Storage

A wide selection of fuel storage tanks from 450 L to 50,000 L to meet any job site need. Trans Cubes allow for easy transport without emptying and can be stacked to reduce mobilization costs, while also extending equipment run times and minimizing refuelling visits.

Tanks

Versatile tank solutions for fluid storage and drilling operations, including 400 BBL tanks with optional insulation and heating for varying climates. Surface (floc) tanks support sumpleless drilling on zero-disturbance wells with three compartments for effective solids settling, while mixing tanks and shale tanks are designed to manage and contain drilling waste efficiently for transport and disposal.

Fluid Handling

Integrated rig solutions include quiet vapour fans that disperse harmful gases or bothersome insects under mud tank covers, and modular Mongoose shakers for efficient solids control with quick-change screens and low-impact design. The Enviro-Vac system maintains a clean, safe rig environment with optional heated Vac Shacks and remote start capability for cold-weather operation. Transtek enables efficient fluid transfer between tanks in tank farm applications, improving overall site efficiency.

Tank Monitoring System

Ketek's tank monitoring system tracks up to four tanks in real time with customizable level alarms, alerts via text/email, onsite sirens and beacons, and remote online access for tracking and graphs. HMI-configured for various tank types, it runs on solar and battery power with optional shore or 120V connections for flexible site monitoring.

Mobile Buildings

Modular camp buildings improve efficiency and quality of life with fitness and recreation spaces, Geo Lab units, and mobile offices. Supporting laundry, water storage, and restroom facilities streamline operations for a complete camp setup.

Manufacturing

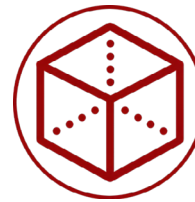

Certified Engineering and Premium Fabrication Services

KETEK
GROUP

Results Driven.

Ketek offers comprehensive engineering, design, and drafting services, supported by a CWB-certified fabrication facility to meet and exceed client requirements. We are ISO 9001 certified for the design, manufacture and maintenance of fabricated equipment, as well as the maintenance of submersible pumps. Our commitment to quality extends across all operations through the application of ISO Management System principles.

5,000 SQ.FT. SANDBLASTING BAY

- Various blast medias
- Blast profiles from commercial through to industrial grade

Ketek uses Green Diamond Abrasive Grits, which are high-efficiency blasting grits prepared by selective screening of nickel slag. It is an ideal product for the efficient removal of mill scale, rust or existing coatings from steel and other metals in preparation for fabrication or painting.

1,200 SQ.FT. PAINT/CURING BAY

- Commercial or industrial grade paint
- Epoxys, urethanes and specialized coatings
- Custom colour matching, multi-colour, priming and masking

Ketek is a diverse company, allowing us to provide fittings, forming, engineering, and electrical services in-house. With our own dedicated sandblasting bay and paint booth, we're a one-stop shop.

Machitech Diamond Cut

Compact, high-precision 12' x 6' CNC plasma table featuring a unitized frame and inverted linear rails, designed to support our capability for producing custom parts.

Custom Built Products

We also manufacture many of our own products, parts, and accessories, including electrical cabinets, riser pipes, equipment mounting brackets, trailers, hose reels, line crossings and more.

Power Services

Integrated Electrical, Engineering, Automation & Control Solutions

Core Capabilities

- Electrical engineering and design support
- Electrical drawings, documentation and technical review
- Industrial automation, PLC, HMI and SCADA integration
- Control panel design and CSA-certified fabrication
- VFDs, soft starters, motor controls and pump automation
- Field installation, commissioning and troubleshooting
- Remote monitoring, telemetry and data logging
- Preventive maintenance and operational support

Ketek Power Services supports industrial, commercial and remote operations with practical electrical, automation, control and engineered equipment solutions. Our team combines field execution, in-house technical design, CSA-certified panel fabrication, commissioning and lifecycle support to deliver complete systems from concept through operation.

Engineering & Design

- Electrical design support
- Control narratives and I/O review
- Drawing packages and as-built support
- Mine compliance and quality control

Panel Shop Services

- CSA-approved assemblies
- PLC, VFD and starter panels
- Switchboards and distribution panels
- Junction boxes and field panels

Automation Solutions

- PLC and HMI programming
- SCADA and remote monitoring
- Process and pump automation
- Data logging and alarming

Temporary & Permanent Power

- Custom power skids
- Distribution and protection
- Generator integration
- Licensed field electricians

Power Services delivers complete electrical and automation solutions that integrate Ketek field experience, engineering support, panel manufacturing, commissioning capability and remote monitoring technology. The examples below represent repeatable solution categories rather than a single product offering.

CONSULT

DESIGN

BUILD

PROGRAM/TEST

COMMISSION

Pump & Process Automation

- Intelligent pump skids
- Horizontal pump systems
- Chemical injection systems
- Well level, flow and pressure control

VFD & Motor Control Systems

- VFD panel design and integration
- Motor starting and protection
- Pump performance optimization
- Field troubleshooting and support

PLC, HMI & SCADA

- PLC programming and testing
- HMI graphic updates
- SCADA panels and communications
- I/O mapping and addressing documents

Intelligent Pump Control Systems (IPCS)

Ketek's IPCS provides automated control of a pumping system to maintain precise well-level or supply pressure to help extend equipment life and reduce maintenance. The IPCS modular design integrates Ketek's structural, mechanical, electrical, and instrumentation engineering capabilities. It features precise well-water level and water flow or volume controls, datalogging capabilities for operational history and compliance with approvals, standardized components for proven reliability and rapid delivery, and customizable configurations to meet specific client requirements.

- Reliable operation with long service life and minimum maintenance
- Maximize water production and minimize energy consumption
- Suitable for multiple water services, including sour water
- Operational data presented in real time
- Data logging equipment capabilities

Power Distribution & Controls

- Low to medium voltage switchboards
- Distribution panels
- Starter boxes and soft starters
- Protection and control panels

Remote Monitoring & Telemetry

- SmartTEK and IIoT integration
- Alarms, trends and data logging
- Remote visibility and operational reporting
- Fleet and equipment monitoring

Field Services & Commissioning

- Installation support
- Start-up and commissioning
- Preventive maintenance
- Emergency troubleshooting

SERVICE

Ketek offers repair, maintenance, diagnostics and testing of generators, pumps, light towers, VFDs, starter boxes, control panels and more. Our skilled service team is here to support all of your needs. When it comes to equipment maintenance and service, we have you covered.

KETEK
GROUP

Results Driven.

Knowing when and how to service and maintain equipment will keep it functioning when it is needed most. It will also extend the equipment's lifespan, reducing operating costs and potential downtime. At Ketek, we own and operate hundreds of generators, pumps, light towers, frost fighters and more. We use them in our own operations in some of the most difficult conditions imaginable (think Northern Alberta at -40°C). We have the knowledge, skills and experience to keep them operating efficiently and reliably, and can do the same for your equipment.

Servicing Electric & Diesel Pumps

Ketek offers service contracts for all types of electric submersible and vertical turbine pumps, tailoring your contract to suit your individual operational requirements to maximize pump life-time and efficiency.

With more than 45 years of experience maintaining, repairing and servicing electric and diesel pumps, our skilled service division is the ideal choice for all your submersible pump repairs. Our staff of service technicians and pumping technicians is made up of experts experienced in helping our customers choose and maintain the equipment that's right for them.

Transportation

The Fleet, the People, and the 24/7 Determination to Move Western Canada Forward

At Ketek Logistics, we pride ourselves on our fleet, our people, and our systems. Our determination allows us to offer safe and responsive service to all of our clients. Ketek Logistics offers a comprehensive fleet, including winch, bed, and picker trucks, as well as dedicated hotshot and pilot vehicles. We utilize this equipment to transport both general and oversized client-owned cargo to and from worksites.

365
DAYS A YEAR

With six operational centers across Western Canada, we serve oilfield and industrial clients, as well as various municipalities throughout the Western provinces. Our personnel are pre-approved for many vendor sites, ensuring quick and efficient access to your locations.

Safety

Ketek Logistics is committed to conducting business in a manner that safeguards the health and safety of our employees, those affected by our activities, and the environment. Our goal is to achieve and exceed Health, Safety, and Environment (HSE) performance excellence, as measured by our customers, industry peers, government regulators, and our internal targets.

The Legacy

Ketek Logistics was founded in the winter of 2018. We began with just two trucks and a commitment to meeting our customers' needs. As our client base rapidly expanded, we grew our fleet to keep pace with that demand.

Our Fleet

Whether you require a lowboy, a picker, or any other specialized transportation equipment, Ketek Logistics has the right equipment for your needs. We provide safe and responsive solutions for transporting and delivering equipment and materials.

Winch Trucks

Used to move tanks, heavy equipment, job shacks and camp trailers.

Light Picker

Ketek's seven-ton knuckle picker has a 23' deck and is ideal for jobs that require mobility and flexibility.

Pilot Trucks

Ketek can support your next heavy-haul project with care and expertise.

Lowboys

To haul heavy equipment and give that extra bit of clearance.

Bed Trucks

For the heaviest loads in the toughest conditions. Our bed trucks feature a 100" roller width and a 22' deck.

Recovery Truck

Our recovery truck comes with a 26' deck and a load capacity of 25,000 lbs.

Hotshots

Ketek's trained personnel are approved on most vendor lists, giving us access to industrial sites across Western Canada. From motors to chairs to client employees, we can deliver it all.

Landoll Trailer

53' Tilt recovery trailer for maximum versatility.

Our mission is to deliver a positive, reliable experience to each and every one of our clients while offering exceptional value and providing a safe and secure work environment.

Environmental Solutions

Cleaner, Safer, and More Sustainable Future

Composting & Organic Waste Solutions

Transforming organic waste into compost turns waste into a valuable resource by locking carbon in soil, restoring nutrients to degraded land, and supporting local food security. It also reduces waste management costs by lowering transport, treatment, and landfill fees through separating compostable materials from waste. Composting helps reduce greenhouse gas emissions by preventing methane production from organic waste in landfills, supporting climate change mitigation and improving waste efficiency.

KETEK
GROUP

Results Driven.

At Ketek Group, we turn environmental responsibility into practical, innovative solutions. For more than 45 years, we've helped industries manage waste, protect natural resources, and operate sustainably through cutting-edge engineering and technology.

Industrial Incinerator Design and Customisation

97% REDUCTION
IN WASTE
VOLUME

Industrial incineration systems provide controlled thermal destruction of hazardous, non-recyclable, and contaminated waste, reducing environmental risk and regulatory liability. The Ketek Advantage offers in-house engineered, custom-designed systems with integrated emission controls to meet strict air quality standards. From waste characterization to installation and support, the process ensures safe operation, up to 97% waste volume reduction, lower disposal costs, and reduced environmental liability.

Water Sampling, Characterization & Treatment

Industrial and municipal water systems often contain complex contaminants such as heavy metals, hydrocarbons, dissolved organics, and suspended solids, creating risks of environmental impact and non-compliance with Alberta Environment and Protected Areas (AEP) discharge standards if not properly treated. The Ketek Advantage offers integrated water treatment solutions with field sampling, laboratory analysis, and bench-scale optimization to ensure accurate chemical dosing and regulatory-aligned design. This approach improves cost efficiency by reducing chemical overuse, ensures compliant and safe discharge, and delivers reliable, consistent treatment performance.

Other Solutions

- Sewage Treatment Systems
- Specialized Pet Crematoriums
- Research & Development
- Environmental Product Sales

Customized Waste Disposal

Ketek Group provides engineered waste flow solutions that improve site safety, efficiency, and regulatory compliance by replacing unstructured waste handling with a managed system. Using tailored disposal strategies, Burnbox system integration, and full traceability with complete documentation, Ketek ensures waste is audited, classified, segregated, and removed on a scheduled basis. This structured approach improves efficiency, supports EPEA compliance, and reduces reactive costs while minimizing site congestion and environmental risk.

Land Remediation and Reclamation

Ketek Group supports land reclamation by restoring disturbed sites to meet regulatory closure requirements, reducing long-term environmental liability, and re-establishing stable ecosystems. Our approach improves ecosystem recovery and vegetation success, strengthens regulatory compliance and closure readiness, and aligns with Indigenous land stewardship values, ensuring sites are returned to a sustainable condition for the future.

Safety / Training Services

Industry-standard Training and Safety

KETEK
GROUP

Results Driven.

A leading provider of industry-standard safety training and equipment operator certification across Western Canada. Our mission is to ensure your workforce remains compliant, safe, and efficient by helping you build a proactive safety culture that exceeds OHS regulations. We offer flexible, expert-led training solutions, including:

- **Certified Programs:**
Energy Safety Canada (ESC) sanctioned courses and Red Cross First Aid.
- **Equipment Training:**
Comprehensive heavy equipment operator certification.
- **Accessible Locations:**
Training delivered at our facilities in Edmonton, Fort McMurray, and Grande Prairie, or directly on-site at your location.

TRUSTED
INSTRUCTORS

FLEXIBLE
SCHEDULING

IN PARTNERSHIP WITH

WestPro delivers industry-recognized safety training and heavy equipment operator certification across Western Canada. Train at our facilities or choose on-site training delivered directly at your job site for maximum convenience and operational efficiency. By partnering with WestPro, you gain an experienced team dedicated to preventing workplace incidents through education, integrity, and long-term collaboration.

Safety Training Courses

We are dedicated to providing industry leading training as well as exceptional customer service. Our experienced instructors come from diverse industry backgrounds, bringing in-depth knowledge and valuable insights tailored to the unique needs of each application.

- Aerial Work Platform (AWP)
- Canadian Red Cross First Aid
- ESC - Fall Protection
- ESC - Mobile Elevated Work Platform
- Fall Prevention
- Fire Extinguisher (FIAR and VR Simulator)
- Forklift Operator
- ESC H2S Alive
- ESC H2S Alive Blended Assessment
- Heart & Stroke CPR & AED
- Heart & Stroke Basic Life Support (BLS)
- Indoor Crane, Rigging & Hoisting
- Load Securement
- Loader Operator
- New Driver (CLASS 5) Program
- Skid Steer Operator
- Wildlife Awareness with Bear Spray
- Fall Prevention / Aerial Work Platform
- Loader / Skid Steer Operator
- Loader Operator / Forklift Operator

Our Partners

Safety Services

15+ YEARS

We provide safety-related expertise to a wide variety of clients. We believe that, through education, training, and encouragement, unplanned events can be prevented. By working with clients, consultants, and contractors, we help build strong safety cultures and ensure compliance with Occupational Health and Safety (OHS) laws and regulations. Our experienced team strives to deliver quality service, build long-term client relationships, and act with integrity in all aspects of our work.

Your Prime Contractor for Safety!

Bringing on WestPro Safety Services as the Prime Contractor for Safety serves a variety of functions for our clients, some of which include:

- OHS Act Section 3(10) Compliance
- Legal Defence for Land Developers
- Unified Site Safety Management

Pumping the Peace

Ketek Group was able to deliver efficient large-scale water transfer systems in challenging conditions. The team designed and operated an 18-kilometre pumping system from the Peace River, capable of moving up to 5.6 cubic metres of water per minute. By combining high-capacity pumps with innovative solutions to manage elevation changes and environmental constraints, Ketek ensured reliable performance while minimizing environmental impact.

Camrose Water Treatment Plant

We replaced three water transfer pumps and two backwash pumps, working closely with industry partners to ensure all new equipment met existing specifications. The project included removing old pumps, installing new units, integrating existing motors, and carefully commissioning the system while maintaining strict water quality standards through testing and contamination prevention measures.

Dickson Dam

Ketek removed, repaired, and reinstalled a 75-foot vertical turbine pump at Dickson Dam near Red Deer. The project involved transporting the pump to Edmonton for refurbishment, then reassembling and lowering 15 sections into a confined well with crane support and precise coordination. Once commissioned, the pump operated successfully, supporting reliable municipal water infrastructure.

Blackfalds Wellpoint Dewatering

Using a network of closely spaced wellpoints connected to a vacuum system, we efficiently remove groundwater to create stable, dry conditions for excavation—even in challenging environments. This approach enables safe trenching and construction by lowering the water table and preventing soil instability, demonstrating our ability to deliver effective, engineered dewatering solutions for complex industrial projects.

Ketek's Sister Companies

Ketek Infinity

Ketek Infinity is a partnership between Ketek Group and Infinity Métis Corporation that performs work in the Regional Municipality of Wood Buffalo and surrounding area. Ketek Infinity focuses on water management and equipment rental. Their water management talents include surface water pumping, groundwater control, well testing and pump maintenance.
