

Introducing the Future of Water Tree System

Are slow fill times and safety concerns with traditional diesel-driven water trees holding your operations back?

Our innovative solution is designed to improve efficiency, reduce costs, and streamline your water distribution process.

Advantages:

INCREASED SAFETY:

With remote controls, operators remain safely in their trucks, eliminating the need for constant climbing.

COST SAVINGS:

Reduce operational expenses with our smart system that runs the generator only when needed. Or, eliminate generator costs entirely by connecting to line power for uninterrupted, fuel-free operation.

EFFICIENCY BOOST:

Fast fill times allow you to get more trucks on the road each day.

How It Works:

Our system features a submerged pump capable of delivering high flow rates. Powered by a portable diesel generator, the pump is easily controlled remotely. Simply position the pump in the water source, connect the hoses, and activate the system from your truck cab. The high-volume flow ensures rapid filling of your water trucks.

Key Benefits:

INSTANT, HIGH-VOLUME FLOW:

Our advanced submersible pump provides immediate, high-capacity water flow without the hassle of priming.

REMOTE CONTROL CONVENIENCE:

Operators can stay in their trucks and control the system with ease, boosting productivity while reducing accident risks.

FLEXIBLE POWER OPTIONS:

Choose between a portable diesel generator or line power. By using line power, you can eliminate generator and fuel costs entirely.

FASTER FILL TIMES:

Quicker fills mean more trucks can be loaded per shift, increasing your overall productivity.
